

ASBESTOS MANAGEMENT PLAN

In the province of Ontario, all buildings that contain an Asbestos Containing Material (ACM), whether that ACM is friable or non-friable, must have an Asbestos Management Plan (AMP) in place according to O.Reg. 278/05.

Note: As of November 1st, 2007, non-friable ACMs must also be included in the scope of an AMP.

Having an AMP not only achieves legal compliance but gives employers and employees an appropriate framework to control asbestos exposure and thereby reducing the health risk and liabilities that asbestos imposes.

How Oakhill Can Help:

Oakhill will assist you by implementing an AMP that meets full legal compliance for building owners and employers in Ontario. We will sit down with you and discuss what health and safety objectives regarding asbestos you require, and design the AMP to meet your specific needs. We will assist you in prioritizing asbestos control objectives and help you separate the 'wants' from the 'needs' so that you can effectively resolve outstanding non-compliance issues and do so within your budget constraints.

By choosing Oakhill as your asbestos consultant you can rest knowing that our professional staff will handle all of your asbestos issues and keep your health and safety record intact. Oakhill's asbestos team has been helping our clients, both large and small, develop and maintain AMPs since the 1990's.

Applicable legislations:

Occupational Health and Safety Act

O. Reg. 278/05 (Designated Substance – Asbestos on Construction Projects and in Building and Repair Operations)
